About

I'm a creative frontend developer who is great at problem solving, with an eye for design, and enjoys being involved in the whole UI/UX process.

Over the past 6 years, I have gained vast experience from building greenfield projects, to migrating legacy codebases, collaborating across large teams whilst following agile processes, and writing clean, documented and well tested code.
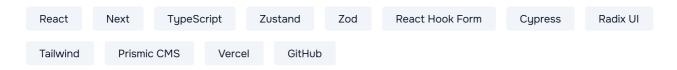

Work Experience

Frontend Developer - Salmo Visa   Oct 2023 - Feb 2025

A legal SaaS web application that helps immigrants reduce their lawyer costs

- Used React and Next to re-build their customer facing application.
- Integrated with APIs to handle user authentication, manage travel and visa history with CRUD operations, and displaying data on the user dashboard.
- Managed a large global state with Zustand.
- Handled schema declaration and form validation with Zod and React Hook Form.
- E2E and component testing with Cypress.
- Created and styled accessible components with Radix UI and Tailwind CSS.
- Built reusable components for the marketers to create blog articles with Prismic CMS, and fetched blog data using the Prismic API client.
- Set up the CI/CD pipeline using Github Actions and Vercel.

React   Next   TypeScript   Zustand   Zod   React Hook Form   Cypress   Radix UI

Tailwind   Prismic CMS   Vercel   GitHub

Frontend Developer - Spamhaus   Mar 2023 - Jul 2023

A cybersecurity organisation that provides anti-spam services to 4 billion users every day

- Migrated their legacy codebase from Vue 2 to Vue 3, and implemented the use of TypeScript.
- Used Nuxt to build their Threat Intel Community dashboard, working with an external design agency.
- Utilised the Nuxt Layers system to share common components and config across different domains.
- Created a component library using Storybook and the PrimeVue components as a base.

Vue   Nuxt   TypeScript   Pinia   Vitest   Storybook   PrimeVue   Sass   GitLab

Frontend Developer - AlphaStream (now PersonaFin)   Dec 2020 - Mar 2023

A B2B fin-tech product that delivers personalised news based on user trading activity

- Used Vue and Vuetify to quickly create interfaces to manage their internal financial entities.
- Led the frontend build of their demo platform, which was used to showcase their tech to clients.
- Integrated with complex external APIs to display price data on TradingView charts.
- Followed a Git workflow that utilised feature branches to deploy sites with Azure.
- Worked with a large team following agile practices, and contributed to code reviews and agile ceremonies.

Vue   Pinia   TypeScript   TradingView Charts   Vuetify   Sass   Azure CI/CD   GitHub

Full-Stack Developer - Salmo Visa   Nov 2019 - Dec 2020

A legal SaaS web application that helps immigrants reduce their lawyer costs

- Used Vue and Vuex to build the frontend of their MVP product.
- Integrated with Firebase as a low-code solution for the backend, which allowed quick and easy set up of the database and user authentication.
- Used the Firebase APIs and Vuelidate to validate forms and allow users to sign-up and log-in.
- Helped the marketers distribute blogs and help-centre articles using Hygraph CMS and the GraphQL Content API.

Vue   Vuex   Firebase   Vuelidate   Hygraph CMS   GraphQL   GitHub

Web Developer - Meahe Design   Feb 2019 - Nov 2020

A creative design agency based in London

- Worked alongside the in-house designer and founder to create websites for a range of clients.
- Used Vue to build the frontends, and Sass for styling components.
- Integrated with Wordpress and ACF to use as a headless CMS.

Vue   Wordpress   JavaScript   HTML   Sass   GitHub
